32. North Marin County (1:100000)  
33. South Marin County (1:125000)

(Map scale is in parenthesis)

## **INTRODUCTION**

The purpose of this technical summary is to document the 1454-zone MTC regional travel analysis zone (RTAZ) system.

MTC maintains a set of regional travel analysis zones for use in regional planning studies. These travel analysis zones, or TAZes, are typically small area neighborhoods or communities that serve as the smallest geographic basis for travel demand model forecasting systems. The design of a travel analysis zone system is generally a compromise between forecast precision and measurement errors. Very small zones tend to have the best precision for forecasting purposes, but also have higher measurement errors (i.e., allocating future population and employment estimates to very small areas.)

MTC staff periodically updates the travel analysis zone system to reflect changes in decennial census geography, changes in computing capability, and forecasting needs for particular corridor studies. This current set of changes is made to adjust and expand MTC's regional travel analysis zones to mesh with Census 2000 geography.

Planners of the MTC predecessor agency, the Bay Area Transportation Study Commission (BATSC), created the original MTC zone system, with 290 zones, in 1965. MTC staff have updated the zone system several times over the past decades, increasing to 440 zones in the mid-1970s, to 550 zones in the early 1980s, to 651 zones in 1987, to 700 zones in 1989, and to 1099 regional travel analysis zones in 1993.

# of Zones	Year of Change	Reason for Change
290	1965	Original System
440	1973	1970 Census
550	1982	1980 Census
651	1987	BART Extension Studies
700	1989	BART Extension Studies
1099	1993	1990 Census
1454	2002	Census 2000

In addition to regional travel analysis zones and counties, MTC supports an intermediate geographic scale, "superdistricts," for analysis and reporting purposes. The 34-superdistrict system was designed in 1982 and is still currently being used. In 2002, minor boundary adjustments between superdistricts #33 and #34 in Marin County were needed to conform superdistrict boundaries to Census 2000 geographic areas (i.e., census tracts).

The bulk of this technical summary includes correspondence, or equivalency tables, between the MTC 1454 zones, MTC's 1099-zone system, and Census 2000 geography.

A map of MTC's 34 superdistricts is included as Figure 1.

Zone locator maps are included as Figures 2 through 33. With the exception of San Francisco (Figures 2 through 4) and Marin (Figures 32 and 33), all of the zone locator maps correspond with MTC's 34 superdistricts. For example, Figure 7 shows zones within superdistrict 7, Figure 19 shows zones within superdistrict 19, etc.

## **COUNTY-LEVEL CORRESPONDENCE**

County-level correspondence between MTC's 1454 and 1099 zone systems and Census 2000 census tracts is provided in Table 1. Also included in this table are statistics related to 2000 population, population per zone, population per tract, and the average number of 1454 zones per each census tract.

A key feature of the 1454-zone system is that the zones nest entirely within Census 2000 census tracts. This is in contrast to the 1099-zone system where dozens of zones were aggregations of two-or-more census tracts.

Zones are numbered consecutively from 1 to 1454 starting in downtown San Francisco, numbered counter-clockwise through the region and ending in southern Marin County. Zones are also numbered consecutively within each superdistrict.

## **SUPERDISTRICT-LEVEL CORRESPONDENCE**

Correspondence between MTC 34 superdistricts and 1454-zones is shown in Table 2. In terms of changes between the 1099-zone and 1454-zone system, the most zones were added in Santa Clara County (+99), followed by Alameda County (+89) and San Francisco County (+63). No zones were added to Marin County. (The change in number of zones per superdistrict in Marin County is due to a minor shift in the zone and superdistrict boundaries.) The most zones added, on a superdistrict basis, were to superdistrict #18 (Oakland/Alameda, +38) and superdistrict #3 (Mission District in San Francisco, +34).

## **SPLIT TRACT ZONES**

Split census tracts in the 1454-zone system are listed in Table 3. Thirty of the 1405 Bay Area census tracts are split into a total of 79 travel analysis zones. These are primarily tracts in downtown areas (downtown San Francisco), heavy employment areas (Silicon Valley) and special generators (Oakland Airport and Coliseum).

The six-page Table 4 is an equivalency listing for the split tract zones, their 1454-zone equivalent, and component Census 2000 CTPP zones. CTPP zones are the 4070-zone "census zone" system that was defined by MTC staff for use with the Census Transportation Planning Package (CTPP), or the "journey-to-work" package.

A full equivalency table between the MTC regional travel analysis zones (RTAZ) and the CTPP census travel analysis zones (CTAZ) will be available from MTC staff. This will be needed to compress data from the CTPP from the 4070-zone CTAZ system to the MTC 1454-zone or 1099-zone RTAZ systems.

## **EXTERNAL ZONES (Zones 1455 – 1475)**

The MTC regional highway networks include 1454 zones within the nine county region and 21 zones to represent the travel at each of the gateways to the region. The correspondence between the 21 regional gateway zones in the 1454-zone system, the 1099-zone system, the state highway number, the common name of the gateway, the Bay Area county and external neighbor county, is provided in Table 5.

External travel analysis zones are numbered consecutively starting at Highway 1 at the Sonoma/Mendocino County lines, clockwise around the region ending at Highway 1 at the San Mateo/Santa Cruz County lines.

### **CORRESPONDENCE BETWEEN 1099 AND 1454 ZONE SYSTEMS**

Correspondence between the MTC 1099-zone and MTC 1454-zone systems is provided in Table 6. This table includes one row of data each of the 1099 travel analysis zones. Also included in Table 6 is a tally of the number of census zones in each 1099 RTAZ.

Variations on these 1099-to-1454 equivalency tables will be developed by MTC to facilitate the translation of databases between the two zonal systems. New sets of MTC travel forecasts will be prepared at the 1454-zone system level, but there will be a need to convert these regional databases into the older 1099 zone system to meet the data needs of Bay Area Partnership agencies.

Users of Table 6 may note several examples of the 1454-zone number with a decimal place (e.g., 74.1 and 74.2). This shows that the 1454 TAZ straddles two-or-more of the 1099 TAZes. For example, part of the new zone 74 (74.1) is in the 1099-zone #56, and the other part of the new zone 74 (74.2) is in the 1099-zone #57.

### **CORRESPONDENCE BETWEEN CENSUS TRACTS AND 1454 ZONE SYSTEMS**

Correspondence between the Census 2000 census tracts and the MTC 1454-zone system is shown in Table 7. This table includes one row of data for each of the 1405 census tracts in the nine-county region. Multiple 1454 zones are shown for each of the 30 census tracts that are split.

Correspondence between MTC 1454-zone system and Census 2000 census tracts is provided in Table 8. This table also includes correspondence between the 1454-zones and 1099-zones systems. Also included are superdistrict and county codes for all zones.

### **FOR MORE INFORMATION**

For more information on the MTC travel analysis zone systems and this technical summary, contact Mr. Chuck Purvis of MTC at 510-464-7731, or e-mail: [cpurvis@mtc.ca.gov](mailto:cpurvis@mtc.ca.gov).

In addition, this technical summary, and correspondence and equivalency files will be posted on MTC's File Transfer Protocol (FTP) Internet site. Point your web browser to the location: <ftp://ftp.abag.ca.gov/pub/mtc/planning/corrlib/>

Geographic Information Systems (GIS) boundary layers, in ESRI "shp" format, are available at MTC's web page, at: <http://www.mtc.ca.gov/GIS/>. Boundary layers include the 1099-zone, 1454-zone, 4070-census zone, and 34-superdistrict systems.
